**MUST BE
INSTALLED
BY A LICENSED
ELECTRICIAN**

THANK YOU FOR PURCHASING

Thank you for purchasing this quality Ventair ceiling fan. To ensure correct function and safety, please read all instructions before using the product and keep all instructions for future reference.

SAFETY PRECAUTIONS

The information contained in the following pages has been prepared to ensure you of trouble-free operation of your ceiling fan.

1. To ensure the success of the installation, be sure to read the instructions and study the diagrams thoroughly.
2. All electrical work should only commence after disconnection of the power. Remove fuses or turn off the circuit breaker to ensure all pole isolation of the electrical supply.
3. Make sure that your installation site will not allow the rotating fan blades to come in contact with any object and that there is a minimum clearance of 150mm from the blade tip to the wall or ceiling. Please note that the greater the clearance around the fan, the better the airflow will be.
4. The fixing point for the fan must be able to support the weight of 4 times that of the net weight of the fan. Net weights can be found on the next page. If you are mounting the fan to a ceiling junction box, the box and fixing must be able to support the moving weight of the fan and must not twist or work loose.
5. The fan must be earthed.
6. Do not connect the fan motor to a dimmer switch. This may give an unsatisfactory performance (motor hum) and cause damage to the motor.
7. It is not recommended that ceiling fans and gas appliances be operated in the same room at the same time.
8. Do not insert anything into the fan blades while the fan is operating. This will damage the blades and upset the balance of the unit causing the unit to wobble.
9. After the fan is completely installed, make sure that all connections are secured and tightened to prevent any problems.
10. Because of the fan's natural movement, some connections may loosen. Check the support connections, brackets and blade attachments twice a year to make sure they are all secured. If they are loose, tighten with a screwdriver.
11. Always have your fan installed by a licensed electrician.
12. This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.
13. Children should be supervised to ensure that they do not play with the appliance.
14. The fan is to be installed so that the blades are at least 2.1 meters or more above the floor.

IMPORTANT:

This fan is suitable for indoor/ fully covered outdoor use only.

An all-pole disconnection switch must be incorporated into the fixed wiring, in accordance with local wiring rules.

SPECIFICATION

MODEL	Light Wattage (W)	Fan Wattage (W)	Voltage (V)	Frequency (Hz)	Net Weight (Kg)
STA1203WH-LR	2 x B22 Base Max 15W each	55 watts	220-240 V	50Hz	6.80kg

PARTS LIST

Unpack the fan and carefully identify the parts. Please refer to Fig1.

Part	Pcs
1.Motor Assembly	1
2.Blades	3
3.Down Rod	1
4.Lower Canopy	1
5.Upper Canopy	1
6.Hang-Sure Set	1
7.Light Diffuser	1
8.Light Frame	1
9.Remote Receiver	1
10.Remote Handpiece	1

INSTALLATION

Mounting Plate Hanging System

1. Ceiling Joist
2. Canopy
3. Quick Fix terminal Block
4. Earth Wire
5. Hanger Ball
6. Down Rod
7. Safety steel wire(to be fixed on the bracket via the screw)

Fix Bracket to ceiling.

- 1.Ensure Bracing structure is solid and firm and able to support at least 4 times the weight of the actual fan .
- 2.Bracket must be fixed securely using only the specially rated screws provided. (failure to comply may result in voiding of warranty)
- 3.Ensure fixing and Bracing structure allows no movement, as this can cause unnecessary noises and wear and tear on the parts.

Please ensure the fixing tab fits into the groove of the hanger ball.

INSTALLATION ON A RAKED CEILING

- 1.Please ensure the fixing tab fits in the groove of the hanger ball.
- 2.Ensure the fixing tab is set at the highest point.

Fixing tab at highest point

BLADE ASSEMBLY

1. Remove light diffuser (Turning counterclockwise direction)

2. Attaching blades in hanging position

NOTE: 'THIS SIDE UP' text on the blades should be facing upwards once the fan is installed.

LIGHT KIT ASSEMBLY

WARNING:

For your safety, ensure the mains supply is switched off at the wiring circuit before performing any electrical tasks.

INSTALLING REMOTE RECEIVER

WARNING: FOR YOUR SAFETY, ENSURE THE MAINS SUPPLY IS SWITCHED OFF TO THE WIRING CIRCUIT BEFORE PERFORMING ANY ELECTRICAL TASKS.

Note: All Screws and fittings provided with this fan must be used for fixing and assembly. (Failure to use screws supplied may result in voiding of warranty)

REMOTE INSTRUCTIONS

Using Remote Control

1. Use Eco/Med/High buttons to alter the fan speed.
2. "OFF" button will turn the fan off only.
3. Turn Light "ON/OFF" for light.
4. 2x AAA BATTERIES

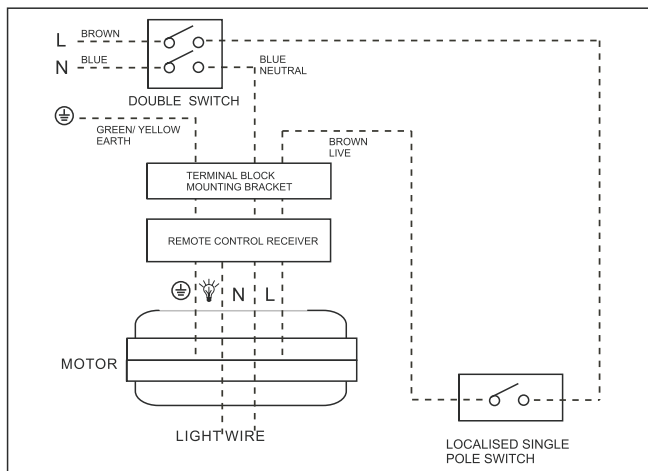

The remote handpiece comes factory paired with the remote receiver, but if you wish to pair a remote handpiece to multiple fans, see below

Step 1 : Turn "OFF" isolation switch.

Step 2 : Turn "ON" isolation switch and within 10 seconds, press LIGHT "ON" button for 3-4 seconds until a "Tick-Tack" sound is heard. (Repeat steps above if not successful).

WIRING DIAGRAM FOR ISOLATION SWITCH WITH REMOTE CONTROL

- All pole disconnection switches must be included in the fixed wiring.
- Do not use a solid state dimmer control.
- Do not use the light switch to control the fan motor.

Step 1: Connect the EARTH wire to the terminal port marked “⊕” on the terminal block mounting bracket.

Step 2 : Connect the supply LIVE wire to Localised single pole switch and then wire to terminal port marked “L” on the terminal block mounting bracket.

Step 3: Connect the supply Neutral wire to the terminal port marked “N” on the terminal block mounting bracket

WARNING:FOR YOUR SAFETY,ENSURE THE MAINS SUPPLY IS SWITCHED OFF TO THE WIRING CIRCUIT BEFORE PERFORMING ANY ELECTRICAL TASKS.

Once all the above steps have been followed, you are now ready to restore the mains power supply. Make sure there is nobody near or under the fan, then turn ON the fan (and light switch if included in your model) to test.

- Keep the fan clean. Wipe away dirt with a clean soft cloth, ordinary soap and water, wipe dry. Do not use solvents, etc. (Gasoline or petroleum.)
- Make sure to disconnect the power supply before cleaning and maintenance is carried out.
- Ensure that the fan is switched off from the supply mains before removing the guard.

The points described below should be checked, and corrected if necessary, upon installation and at least once a year thereafter.

Excessive movement and wobbling?

- Check all screws, bolts and nuts are secured tightly.
- Change position of the blades.
- Check blade height. Carefully rotate the fan and measure each blade from a fixed point on the ceiling. (Adjust if necessary, by loosening and re tightening the upper or lower blade screws)

Does the motor, down rod or other components shake or vibrate abnormally?

Shaking and abnormal vibration can be caused if the blade holding screws or screws for the suspended parts are loose, or if a blade is deformed. If a blade is deformed, all 3 (or 4) blades should be replaced as a set.

Is there any unusual noise such as knocking or ticking?

Are the blade holding screws or screws for the suspended parts loose?

1. Make sure the bracing structure is sound and firm. Even slightly loose fixings may create knocking or ticking that will reverberate down through the fan. Upper canopy should not be in contact with the ceiling surface. It is suggested to leave an even 1mm to 4mm gap between ceiling and edge of upper canopy.
2. Irregular humming noise may be caused by electrical interference from another appliance, or ripple control signals being introduced by electricity provider.

Night Noise:

This is the biggest cause for service calls, which are outside the manufacturer's warranty. If a fan has a fault, it will always be noticeable. Naturally when everything is quiet at night, you will be more inclined to hear small noises, which may not be noticeable at other times. Even slight power fluctuations and/or mains frequency control signals superimposed in your electricity supply for off-peak hot water control may cause a change in fan motor noise. This is normal.

WARNING:

If at any stage the fan develops excessive wobbling or unusual oscillating movement is observed, immediately stop using the ceiling fan and contact the manufacturer, its service agent or suitably qualified persons.

Fan Light:

Except for an actual fault in manufacturing, which is extremely rare, noises and vibrations are often more accentuated when a fan light is fitted. For instance, a fan light diffuser that has not been tightened or worked loose can cause a rattle. Frequent care and maintenance will reduce this.

Do not dispose of electrical products with household waste. Please check with your local council for advice on disposal or recycling. If electrical appliances are disposed of in landfills or dumps, hazardous substances can leak into the groundwater and get into the food chain, damaging your health and well-being.
